

## Biography

Suzanne Humphries, MD, is a board-certified doctor of Internal Medicine and Nephrology with a private practice, as well as an author, and Holistic Health Consultant.

She earned her medical degree at Temple University, in Philadelphia, PA. For three years, she was an Assistant Professor of Nephrology at UMDNJ, Robert Wood Johnson, and she was honored with a Fellowship from the Medical College of Pennsylvania/Hahnemann University School of Medicine, Division of Nephrology. For eleven years, she worked in conventional practice in Internal Medicine and Nephrology, in Bangor, Maine.

Dr. Humphries began her own practice after many experiences with patients revealed that vaccines were causing kidney failure, but the conventional system and her colleagues restricted her efforts to protect patients. She writes:

"This was the first time in my career that my opinion regarding kidney failure was not respected. Any other time I suggested that a drug was responsible for kidney damage, that drug was immediately discontinued—no questions asked. This happens routinely with certain blood pressure drugs, antibiotics, pain killers, etc. Sometimes kidneys can react to drugs in an allergic fashion—to any drug at any time—and that drug would have been stopped. Some drugs cause direct toxicity to the kidneys, and in the past if I suggested to stop or avoid them, they were always avoided. But now I was unable to protect my own kidney--failure patients from vaccinations given in the hospital."

Her clinical observations and experiences led her to research the history, politics, and science of vaccination, and ultimately to becoming an advocate for vaccine reform. She co-authored the book [Dissolving Illusions: Disease, Vaccines, and the Forgotten History](#), on the history and science of vaccines, with Roman Bystryanyk. Her latest book is her autobiography, [Rising From The Dead](#).
